- 8 start buttons
- Transmission cables
- Operating and installation instructions

Description

- Use :** Indoor or outdoor
- Transmission :** cable controlled
- Dimensions :** 130 x 65 x 55 mm
- Weight :** ea. Module : 500 g
- Connections :** The module is equipped with 3 female banana plugs :
- 1 for the connection of the touch pad (Aquatouch)
 - 1 for the start button
 - 1 for the false start pad (Aquafalse)

Waterproof

Functions

- Connexion module :** Collects the signals given by the touch pad, the false start pad and the start button.
One connection module is dedicated to each lane and is installed behind the start block.
Each connection module is an independent electronic unit.
They are connected to each other by a non-removable cable and then linked with the Aquaswim interface for direct registration of the intermediary and final times of each lane.

- Compatibility :** Aquasport V timing system (including the Aquaswim software)

FINA Requirements

At least one start button for each lane is required to register the touch in a semi-automatic way. If the interface gets the signal from the touch pad, the time given by the start button will be registered for information only.
